## Projects

### Hostel Management System | Python

Developed a Python-based system to manage hostel operations, including student registration, room allocation, and data analysis. Improved efficiency and supported decision-making in university settings.

### Agri Connect-Farm to Market | HTML, CSS, JavaScript, MySQL

Designed a web-based platform using HTML, CSS, JavaScript, and MySQL to bridge the gap between farmers and markets. The system supports efficient produce listing, order management, and communication. Focused on improving supply chain transparency and farmer profitability through technology.

### Quick Service Café Service Manager | C#, Windows Forms

Developed a desktop application using C# and Windows Forms to manage café operations, including orders, menu management, billing, and reporting.

### RidePulse – Smart Conductor-Based Digital Ticketing & Bus Intelligence System | Business Analyst

Analyzed requirements for a smart transportation platform integrating digital ticketing, real-time tracking, and demand forecasting. Managed the Kanban board, tracked tasks, coordinated team activities, and monitored project progress
